Subject: TREMEL bug

Daqing,

It seems that the page advance feature does not work properly.

Try Atoh1 TF search. It identified 38 results on the header, but only lists about 8 ATMs below. The 'Next' link at the bottom produces a different figure with only a few dots and does not list the different clusters below.

I tried to clear the cache and retry this, but it is still the same result.

Can you please look into this?

Thanks

Ramin

Thank you,
Daqing Yun

Subject: TREMEL bugs

Hi Daqing,

I have a couple request regarding TREMEL.

- 1) Using Chrome, I do not see a scroll bar for the list of terms. The terms continue in one line. The other sections (i.e. Genes, Transcription factors, Enriched GO and Enriched KEGG) have scroll bars and look fine.
- 2) There still seems to be an overlap problem in the graph. For instance if you search the TF for Atoh1, the header indicates that there are 38 results but the figure only shows 16. I think this is because several dots appear on top of one another. I thought that you fixed this issue. Is it a browser problem?

Thanks for your continued help!

Ramin
